SUMMARY

Backend software engineer working in Java and Python. I lead backend development for NexusCloud, a FastAPI and PostgreSQL platform on GCP that unifies 7 cloud storage providers behind one API, and maintain Sidd-AI, an open-source Java SDK for LLMs on Maven Central with 600+ downloads across 35+ organizations. Comfortable with REST APIs, Docker, CI/CD, DSA and native Android.

EDUCATION

B.Tech, Information Technology | Sri Shakthi Institute of Engineering and Technology, Coimbatore 2024 - 2028
CGPA: 8.3

HSC | Bharathiya Vidya Bhavan, Coimbatore 2022 - 2024
Group: Bio-Maths | Grade: 86.5%

EXPERIENCE

Creator and Maintainer, Sidd-AI (Open Source, Apache 2.0) 2026 - Present
github.com/PRABHUSIDDARTH/sidd-ai | Maven Central | Product Hunt

- Designed and released a framework-agnostic Java SDK that puts 8 LLM providers (OpenAI, Gemini, Claude, Grok, Groq, NVIDIA NIM, Kimi, Ollama) behind one API, with prefix-based model routing and a typed exception hierarchy for auth, rate-limit and API errors.
- Published to Maven Central (io.github.prabhusiddarth:sidd-ai); 600+ downloads and 35+ organizations using it.
- Own the full release cycle: API design, semantic versioning, docs and GitHub Actions CI (currently v1.0.5).

AI Intern, Microsoft Azure AI Virtual Internship (AICTE) July 2025

- Trained and deployed computer-vision models with Azure ML and Azure Cognitive Services; applied ML and prompt engineering.

PROJECTS

NexusCloud | Multi-Cloud Storage Orchestration Platform 2026 - Present
Team of 4, backend lead | github.com/NexusCloud-Orchestra | pre-launch

- Unified 7 storage providers (AWS S3, GCS, Azure Blob, Cloudflare R2, Backblaze B2, Oracle, IBM) behind a single REST API; presigned URLs send file data straight to the user's own cloud, so the platform never stores or proxies it.
- Built the async FastAPI backend on GCP Cloud Run with PostgreSQL and SQLAlchemy, a Redis-backed quota engine and Celery workers for quota polling; credentials encrypted with AES-256-GCM through HashiCorp Vault.
- Designed the Smart Router, which scores each connected cloud on remaining free quota, egress cost and tier permanence to choose the destination for every upload.

Swara | Offline Music Player for Android and iOS 2026
github.com/PRABHUSIDDARTH/SwaraApp | Live demo

- Built a native Android player in Java with Media3 (ExoPlayer), Room and MVVM: queue, sleep timer, widget and versioned schema migrations.
- Shipped 8 color themes that all meet 7:1 text contrast, a SwiftUI port for iOS, and GitHub Actions CI for both platforms.

PyRAG | Retrieval-Augmented Generation Pipeline 2026
github.com/PRABHUSIDDARTH/PyRAG

- Built a modular RAG pipeline in Python with LangChain, Sentence-Transformers (all-MiniLM-L6-v2), ChromaDB/FAISS and Groq-hosted LLMs; a threshold-aware retriever declines low-confidence queries and cites source chunks.

AlgoMentor | AI-Powered DSA Assistant April 2026
github.com/PRABHUSIDDARTH/AlgoMentor

- Built a Flask app on Google Gemini that explains DSA problems, gives progressive hints and analyzes time and space complexity; containerized with Docker and deployed to Google Cloud Run.

TECHNICAL SKILLS

- **Languages:** Java, Python, C, JavaScript, SQL
- **Backend and Databases:** FastAPI, Spring Boot, Flask, REST API design, SQLAlchemy, PostgreSQL, MongoDB, Redis
- **Cloud and DevOps:** GCP (Cloud Run), Azure, Docker, Kubernetes, GitHub Actions (CI/CD), Linux
- **AI/ML and Mobile:** LLM APIs, RAG, LangChain, TensorFlow, Azure ML; Android (Java, Media3, Room), SwiftUI
- **Core CS:** Data Structures and Algorithms, OOP, Operating Systems, DBMS

ACHIEVEMENTS AND LEADERSHIP

- Solved 350+ LeetCode problems; contest rating 1,619, top 21.68% globally.
- Organizer, SIET AI Lab: one of 3 core organizers running the lab's AI activities and projects.
- Organized a 24-hour hackathon for 400 participants, covering logistics and judging coordination.
